Project Highlight

General Assembly Capstone – [Project Community](#):

- Project Community is a community resource application, utilizing Django and PostgreSQL, intended to aid COVID-19 relief and those in need of community resources. The design philosophy is to make things as simple and accessible as possible to transform as many lives as possible. Key tasks being planning, researching, and creating the resource database, and developing code that utilizes location data and text/language accessibility options to return relevant information for users to seek assistance in healthcare, food, shelter/housing, employment, education, utilities/finances, disability and other services.
